Release Notes: AVG Business Antivirus 20.7 (October 7, 2020)

Windows Antivirus: 20.7

This release contains new improvements and bug fixes to our AVG Business Antivirus client.

AVG Business Antivirus 20.7 will be available for new installations straight away. All existing devices with AVG Business Antivirus 20.6 or lower will start the automatic upgrade to 20.7 at a later time.

If you wish to upgrade your devices to 20.7 prior to the automatic upgrade, then you can create a new Task (Update device – Program update task) from your console.

A system reboot will be required to complete the installation. There will be no forced reboot unless you have set this in your device policy settings. Servers will never reboot, regardless of your device policy settings.

Improvements

- **Remote Access Shield –** Enjoy even stronger protection against hackers. This new feature lets you choose who can remotely access your computer and lets you block the rest. (The feature will be manageable from AVG Business Console version 8.7 and available for unmanaged clients in AV 20.9)

- **Improved performance –** Your antivirus now runs even more smoothly thanks to tighter inegration with the Windows registry.

Resolved issues

- The incorrect yellow dashboard state after a new version was released, even though auto-updates were on.
- SmartScan stopping caused UI freezing in some cases
- Fixed impact of new CEF on IPM content and IDP
- The incorrect handling of file size in virus chest was preventing more files to be added
