

Release Notes: AVG Business Antivirus 21.4 (June 22, 2021)

Windows Antivirus: 21.4

Release Summary

This release contains new improvements and bug fixes to our AVG Business Antivirus client.

Important!

In this version, the Antispam feature is being removed, and will not be available in any edition of AVG antivirus. For the clients who will not update to 21.4, the Antispam feature will be remotely turned off by the end of June 2021. But don't worry! You are still protected from email attacks with our Mail Shield feature! This feature offers comprehensive email protection by proactively checking incoming and outgoing emails to ensure they are completely malware-free.

Improvements

- No more popups in streams - Good news, Windows 10 users! Our antivirus popups will no longer appear in your screen recordings and streams
- Enhanced exceptions - Exceptions for scans and shields are now easier to add, customize, and maintain

Bug fixes for:

- Web content opened in the app-cart instead of browser
- IP address was missing in Web Shield connection blocker notifications
- The last file from the multi-selection was omitted
- Manually invoked Passive Mode did not require restart, caused some components (like CyberCapture) to misbehave
- Web Shield samples were not detected after the URL was removed from the exceptions
