

Release Notes: AVG Business Antivirus 21.3 (May 10, 2021)

Windows Antivirus: 21.3

Release Summary

This release contains new improvements and bug fixes to our AVG Business Antivirus client.

Important!

AVG Business Antivirus 21.3 and all future versions will require KB3033929 Windows security update to be installed on Windows 7 x64 and Windows Server 2008 R2 operating systems only. Windows 10, Server 2012/2016/2019 do not require this update. Windows 7 and Server 2008 R2 devices without this update will stay on the previous version until the OS security update is installed. Attempting to install 21.3 on a device without this security update will end up installing the previous 21.2 version. Using the offline installation package on a device missing this security update, will end up with an unsuccessful antivirus installation.

Improvements

- Improved Rescue Disk — We've added a portable web browser to our Rescue Disk so you can search the web even when Windows isn't working
- Fewer distractions — We no longer show pop-up messages when your antivirus is open
- Better scan performance — We've made a lot of small performance improvements to our security scans

Resolved issues

- Passive Mode fix — We've fixed a bug that would sometimes disable Passive Mode soon after it was turned on
- Fixed issue - BCC ignores non-existing files when deleting from virus chest
