Antivirus

Antivirus for Desktop (Mac and Windows)

Official Product Name

AVG AntiVirus for Mac, AVG Internet Security for Mac, AVG Antivirus Free, AVG Internet Security

AVG Internet Security Business Edition, AVG Antivirus Business Edition, AVG File Server Business Edition, AVG Email Server Business Edition, AVG Remote Administration

(collectively as "Antivirus for Desktop")

Core Functionality

The Antivirus for Desktop provides protection against malicious software by performing key tasks, such as pinpointing specific files for the detection of malwares, scheduling automatic scans, and securing your device against malware.

What are Product's Main Features

- CommunityIQ is a threat monitoring service for Windows and Mac which sends information about a threat detected in your device to our server, so we can observe how the threat spreads and block it. This is vital for the functioning of our Antivirus and our ability to keep your device secure.
- CyberCapture detects and analyses rare, suspicious files on your Windows. If you attempt to run such a file, CyberCapture locks the file

- from your PC and sends it to our Threat Lab where it is analysed in a safe, virtual environment. All files are uploaded over an encrypted connection, which means your data is inaccessible to hackers.
- File Reputation provides a real-time comparison with an up-to-date list
 of malware databases of executable files sourced from users of
 Windows who agree to participate in the service. FileRep processes files
 or their hashed versions to evaluate which are infectious and updating
 virus databases.
- Online Security is a browser plug-in which needs to be specifically activated which checks if the site isn't malicious or phishing.
- Browser Cleanup is a module inside Antivirus for Desktop (Windows)
 which inspects the browser extensions of most browsers, tries to identify
 malicious extensions and offers to remove them. Browser Cleanup is on
 by default.
- Web Shield scans data that is transferred when you browse the internet in real-time to prevent malware from being downloaded and run on your computer. By default, Web Shield is on and configured to provide optimal protection when switched on.
- File Shield scans programs and files saved on devices for malicious threats in real time before allowing them to be opened, run, modified, or saved.
- Email Shield scans for threats in your incoming and outgoing email messages and attachments. Scanning applies only to messages sent or received using mail management software, such as Microsoft Outlook, Apple Mail or Mozilla Thunderbird.
- Hack Alerts when enabled, it searches and monitors email addresses associated with your Account for data breaches to alert you when your data has been compromised in a breach and your information is exposed on the dark web. This is done in cooperation with our partner SpyCloud which checks your credentials against its repository of stolen accounts. For further information please refer to its privacy policy here.

While using Antivirus for Desktop, we collect and process the following Service and Device Data (in addition to Account Data and Billing Data, if relevant):

Service Data	What we use it for and for how long
Identifier of the content (message) being delivered	Service Provision (36 months) ■ To monitor service functionality In-product Messaging (6 months) ■ To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Product and Business Improvement (50 months) ■ To monitor messaging performance
IP address	Service Provision (36 months) ■ To detect the approximate location of malicious software. For free Antivirus, IP address is replaced at activation with city/country. For free and paid Antivirus, it is a part of malware infection file replaced in 30 days with city/country
Samples, files	Service Provision (36 months) • For protection, detection, analysis, blocking, quarantining and deleting of malicious software
Detections	Service Provision (36 months) • For protection, detection, blocking, quarantining and deleting of malicious software
URLs and referrers	Service Provision (36 months) • For protection, detection, blocking, quarantining and deleting of malicious software
Events and product usage	Service Provision (36 months) • To ensure continuous functionality (installations, versions, updates, settings)

	and map how users interact with our product
	In-product Messaging (24 months)
	To inform users of problems that will not be solved by the currently installed product
	and to offer users a solution to the detected problem
	Product and Business Improvement
	 To better understand our users' behavior
	(50 months)

Note that samples (files, URLs) used for malware analysis are kept in our systems as long as it is necessary to ensure proper functionality of the AV product. These samples are not connected with any identifiers or individuals and the retention periods indicated above do not apply to this use.

The third-party analytics tools we use for Antivirus for Desktop is <u>Google Analytics</u>. For further information regarding our third-party analytics partner, including its privacy policy, please refer to our <u>Privacy Policy</u>.

Antivirus for Mobile (Android)

Official Product Name

AVG AntiVirus Free for Android, AVG AntiVirus Pro for Android (collectively as "Antivirus for Mobile (Android)")

Core Functionality

Antivirus for Mobile (Android) provides people with essential mobile security with added privacy and performance-boosting features. Block malware, check the safety of installed apps, scan public Wi-Fi networks for possible security weaknesses, and locate your phone if it becomes lost or stolen — all with a single app.

What are Product's Main Features

- Device Scan scans your device or a specific file for malware apps and files and various types of security vulnerabilities.
- Wi-Fi Security and Speed Check enables you to scan your network for vulnerabilities, and tests the speed of the network.
- Web Shield detects and notifies you when accessing a malicious website that could represent a potential security risk for you.
- Anti-Theft is designed to protect your private mobile data and help you recover your device in case of loss or theft. This feature is off by default. When you choose to turn it on, you can request location on demand from my.avast.com. Anti-Theft is designed to protect data residing on your mobile phone in the event of theft. For Anti-Theft to function, we must collect and store information about your phone and its approved users. We use this data to locate and identify your lost devices. If the phone was stolen, it may block the thief from using the device. The collected data is used to provide you the functionality. Within Anti-Theft there is a Last Known Location premium feature which is also off by default. When you activate the feature, we send more frequent location updates to the server to help you track your device's last known location.
- **App Locking** is a paid feature, which protects your sensitive apps with a PIN, pattern, or fingerprint.
- App Insights consists of three features: App Usage, Data Usage and App Permissions. App Insights requires your device user permission in order to work and we ask you for this permission (if not granted yet).
 When you grant the permission, we keep the data from your list of installed apps stored locally in your phone's database. App Usage

provides information about how much time you spend using each app. App Permissions allows you to view which permissions are required by each of your installed apps. Data Usage monitors your data consumption and helps you avoid additional charges by notifying you when you approach the limit. This feature requires access to IMEI and IMSI.

- Boost RAM kills apps running in the background of your device.
- Clean Junk analyzes the space on your device and displays the amount of storage space that is being used by junk files.
- Photo Vault allows you to protect access to your photos with a PIN code.
- Hack Alerts when enabled, it searches and monitors email addresses associated with your Account for data breaches to alert you when your data has been compromised in a breach and your information is exposed on the dark web. This is done in cooperation with our partner SpyCloud which checks your credentials against its repository of stolen accounts. For further information please refer to its privacy policy here.
- Privacy Audit provides the user with an evaluation of installed apps based on data collected and permissions asked by the app compared to similar apps. The feature also compares its findings with the app's privacy policy declarations.

Personal Data We Process

While using Antivirus for Mobile (Android), we collect and process the following Service and Device Data (in addition to Account Data and Billing Data, if relevant):

Service Data	What we use it for and for how long
Identifier of the content (message) being delivered	 Service Provision (36 months) To monitor service functionality In-product Messaging (6 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem

	Product and Business Improvement (50 months) • To monitor messaging performance
IP address	Service Provision (36 months) • To detect the approximate location of malicious software. For free Antivirus, IP address is replaced at activation with city/country. For free and paid Antivirus, it is a part of malware infection file replaced in 30 days with city/country
Samples, files	Service Provision (36 months) • For the functionality of malware scanning and analysis
Detections	Service Provision (36 months) • For the functionality of malware scanning
Information concerning URLs of websites visited (malicious and non-malicious) and referrers (previous page with link to malware-hosting site)	Service Provision (36 months) • For Web Shield feature's detection of malicious websites
Events and product usage	 Service Provision (36 months) To ensure continuous functionality (installations, versions, updates, settings) and map how users interact with our product In-product Messaging (24 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Contextual promotional messaging

	 Product and Business Improvement To better understand our users' behavior and users' acquisition (50 months) To improve the user's overall experience by developing new features and products (36 months)
User's email address associated with your Account	 Service Provision (36 months) To search for your credentials in data breaches. To send a requested report to you on whether or not their credentials have leaked. Product and Business Improvement (36 months) To improve the user's overall experience

Device Data	What we use it for and for how long
Online identifiers (GUID, Device ID (Android ID), Advertising ID)	 To ensure functionalities of the product and its features In-product Messaging (24 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Product and Business Improvement To better understand our users' behavior (50 months) To recognize reinstalls of the app on the same device (36 months) Third-party Ads (not stored after provision) We process Advertising ID only for IronSource which allows it to place advertisements

IMSI	Service Provision (accessed only locally)
Location (city/country, longitude and latitude)	 For Anti-Theft functionality to locate a lost phone or track its locations per users request Delivering geo-specific changes to app's configuration (both local or remote) In-product Messaging (6 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Product and Business Improvement To better understand users' behavior based on approximate location (50 months) To introduce a new feature or product based on approximate location (36 months)
Information concerning computer or device (carrier, OS version, OS build number, Hardware ID, device model, device brand, device manufacturer, device API level)	and its features In-product Messaging (6 months) To inform users of problems that will not

	For App Insights's feature Data Usage to provide data consumption of installed apps based on IMSI
Applications	 Service Provision (36 months) To define rules for malware protection how Antivirus should behave In-product Messaging (6 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem
Internet and connection	 Service Provision (36 months) For security prerequisites In-product Messaging (6 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Product and Business Improvement To better understand users' behavior (50 months) To introduce a new feature or product based on previous experience (36 months)

These are the third-party analytics tools we use for Antivirus for Mobile (Android):

- Google Analytics
- Google Firebase and Crashlytics Analytics for Android
- AppsFlyer

For further information regarding our third-party analytics partners, including their privacy policies, please refer to our <u>Privacy Policy</u>.

The free version of Antivirus for Mobile (Android) serves relevant third-party advertisements. These are the advertising partners we use for this product:

- Google AdMob
- Amazon
- Facebook Audience Network
- InMobil
- AppLovin
- Unity Technologies
- IronSource

For further information regarding our third-party ads partners, including their privacy policies, please refer to our <u>Consent Policy</u>.

Antivirus for Mobile (iOS)

Official Product Name

AVG Mobile Security

Core Functionality

AVG Mobile Security (hereinafter as "Antivirus for Mobile (iOS)") provides protection for your <u>browsing</u>, passwords, photos and Wi-Fi. The product consists of several free and paid features, such as <u>Identity ProtectionHack Alerts</u> and Secure Browsing, which are described in detail below.

What are Product's Features

- Identity Protection immediately receives a notification if any of your passwords are found leaked online to keep your identity safe. By choice, users can enter an email address and get back feedback on whether or not their credentials have leaked. The functionality also stores email addresses with respect to which no leak was detected to notify users if we learn that their credentials leaked at a later date.
- Web Shield detects and notifies you when accessing a malicious website that could represent a potential security risk for you.

- Hack Alerts looks for leaked personal information, whether your data has been compromised in a breach and your information is exposed on the dark web. If we identify new breaches we alert you based on the email address you submitted. This is done in cooperation with our partner SpyCloud which checks your credentials against its repository of stolen accounts. For further information please refer to its privacy policy here.
- **Photo Vault** locks your photos in an encrypted vault and secure them with a PIN, Touch ID, or Face ID so that only you have access to them.
- **Wi-Fi Security** automatically scans Wi-Fi networks for vulnerabilities to verify that the network you're connected to is safe. Receive alerts if any risk is detected.
- **Secure Browsing** (available only for paid version) protects your privacy by making sure no one can spy on what you're doing online with Secure Browsing VPN feature.
- Email Guardian is a cloud-based service which monitors emails from supported providers, scans when they arrive in your inbox and flags them as malicious if they contain a threat. In order to deliver its functionality and allow us to improve our products and business, this feature processes personal data, such as e-mail and its content, including attachments. When enabled, it provides protection to your device even when the device is switched off. Connecting this feature to Gmail accounts requires us to ask Google for permission to use its APIs. Google allows companies to use its APIs only if they undertake to limit its use of information accessed through the APIs. As a result, the use and transfer of information received from these Google APIs to any other product will adhere to Google API Services User Data Policy, including the Limited Use requirements.

While using Antivirus for Mobile (iOS), we collect and process the following Service and Device Data (in addition to Account Data and Billing Data, if relevant):

- Google Firebase Analytics and Crashlytics for iOS
- AppsFlyer

For further information regarding our third-party analytics partners, including their privacy policies, please refer to our <u>Privacy Policy</u>.

Official Product Name

AVG AntiTrack for Windows, AVG AntiTrack for Mac, (collectively as "AntiTrack")

Core Functionality

As you browse the web, profiles of your behavior are compiled and linked to you via cookies and digital fingerprint-based tracking technologies—collect and link information about your activities in order to create profiles of your behavior. This data is then shared, bought and sold by analytics and ad-tech firms. AntiTrack removes cookies and masks the device's "fingerprint" to prevent third—parties from identifying you and following your behavior across the web.

What are the Product's Features

- AntiFingerprinting stops scripts from fingerprinting the user's device and tracking their browsing behavior across the web. In particular, this feature relies on processing of browser version, hardware data, OS version, OS locale and AntiTrack version.
- Privacy Score provides the user with an evaluation of how private they
 are based on various in-app configurations. In particular, this feature
 relies on processing of browser version, hardware data, OS version, OS
 locale, AntiTrack version, In-app settings (such as features that are
 turned on/off).
- Clears your browsing history and cookies helps the user manage their browsing history and cookies by allowing them to manually clear them or schedule automatic clearing at their discretion. Fingerprint Randomizer will automatically change the user's digital 'Fingerprint' in regular intervals, or allow the user to manually change said 'Fingerprint'. In particular, this feature relies on processing of browser version, hardware data, OS version, OS locale and AntiTrack version.
- Browser cleanup helps the user manage browsing history and cookies by allowing the user to manually clear this information or schedule an automatic deletion at a specific time. In particular, this feature relies on processing of browser version, hardware data, Cookies, OS version, OS

- <u>locale</u>, AntiTrack version, In-app settings (such as features that are turned on or off).
- Windows 10 Browser protection helps users stay protected from online tracking attempts and similar threats through supported browsers. Any time a suspicious script (tracking attempt) encounters the user's 'Fingerprint', the user is notified. In particular, this feature relies on processing of browser version, hardware data, OS version, OS locale, website scripts and tracking elements, and AntiTrack version.
- Allowed Websites and whitelisting processes allows the user to add their favorite websites into the Allowed Websites list so that their stored browser data is not be cleared during the automatic and manual cookie clearing process. Additionally, no anti-tracking measures will be active on these websites once they are added to the Allowed Websites list. In particular, this feature relies on processing of whitelisted websites, browser version, hardware data, OS version, OS locale and AntiTrack version.
- System Privacy helps stop third parties from seeing, tracking, and collecting customer information from their the supported operating system. Specifically, this is related to the customer's computer login security, protecting files and data on that machine, and keeping the customer's computer activities private. This provides our customers another layer of security by giving them the customer the ability to, within AntiTrack, configure their Privacy Settings within AntiTrack. In particular this feature relies on processing of browser version, hardware data, OS version, OS locale, information about operation system's keys and tasks associated with privacy risks, and AntiTrack version.

We process only the following Service and Device Data (in addition to Billing Data for paid version or Account Data if necessary):

Service Data	What we use it for and for how long

Usage Frequency (e.g., the amount of time the application is in use) Number of Application Launches	•
License Key	Service Provision (the earlier lifetime of the account and 24 months) To regulate access to the product, provide customer support, and administer product updates
_	Service Provision (the earlier lifetime of the account and 2 years 24 months) • We send back the license key through the application for regulating access to To show Browser Protection and Cookie Cleanup status in the product, providing customer support, and administering and identify the default browser for opening the links from the app. • To check the browser extension status (only in supported browsers). • When Browser Protection feature from the product updates ON, for AntiTrack to obfuscate the following properties of the browser under Anti-Fingerprinting: • User-Agent • Plugins • HTTP Headers

Cookies	Service Provision (the earlier lifetime of the account and 24 months) • To identify the "Total (number of) Cookies, and Tracking Cookies" available for a browser • To perform the cookie cleanup (delete the cookies, cache, and browser history).
Whitelisted websites	Service Provision (the earlier lifetime of the account and 24 months) • To add websites into the Allowed Websites list
Website Tracker Details (Javascript, HTML documents)	Service Provision (the earlier lifetime of the account and 24 months) • To identify website trackers on the website that the user is visiting and determine if the Javascript/Html is a tracker or not. In-product messaging (6 months) • To update the user about tracking.
AntiTrack version	Service Provision (the earlier lifetime of the account and 24 months) • To provide user support, troubleshoot In-product Messaging (6 months) • To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Product and Business Improvement (24 months) • To better understand how users' interact with certain aspects
Install Date or Time	Service Provision (the earlier lifetime of the account and 24 months) • To do license management In-product Messaging (6 months) • To inform users of problems that will not be solved by the currently installed product and

	to offer users a solution to the detected problem Product and Business Improvement (24 months) To know when to market new features and or products
<u>Crash Incidents</u>	Service Provision (the earlier lifetime of the account and 24 months) To ensure continuous functionality

Device Data	What we use it for and for how long
OS Version OS information (version, keys, tasks)	-
OS Locale	Service Provision (the earlier lifetime of the account and 2 years 24 months) To segment updates by location In-product Messaging (6 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Product and Business Improvement (24 months)

	 In some cases we might not To determine which segments of our users to roll out a new feature or product to every demographic, in such a case we may use OS locale to segment this (24 months) To better understand how users' interact with certain aspects (24 months)
AntiTrack version Hardware Data (device model, RAM, GPU, CPU)	Service Provision (the earlier lifetime of the account and 2 years) • For user support, troubleshooting, and product development planning In-product Messaging (624 months) • To install the product, provide application updates, customer support To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem • Product and Business Improvement (24 months) • To better understand how users' interact with certain aspects
Install Date or Time	Service Provision (the earlier lifetime of the account and 2 years) To license management In-product Messaging (6 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Product and Business Improvement (24 months) To know when to market new features and or products
Crash Incidents	Service Provision (the earlier lifetime of the account and 2 years) To ensure continuous functionality

Hardware Data (device	Service Provision (the earlier lifetime of the account
model, RAM, GPU,	and 2 years)
CPU)	 To install the product, provide application
	updates, customer support and make user
	experience improvements

The third-party analytics toolstool we use for the AntiTrack Mac platform is Google Analytics. App Center. For further information regarding our third-party analytics partner, including its privacy policy, please refer to our Privacy Policy. Privacy Policy.

Alarm Clock

Official Product Name

Alarm Clock Xtreme

Core Functionality

Alarm Clock provides an alarm clock for Android devices, using built in system features users can schedule alarms and customize their behavior in many ways.

What are Product's Features

 Alarm Clock schedules a one time alarm or repeated alarms, customize sound and other behavior while alarms go off and set many other parameters. This feature does not require any special permission, except when a user wants to use a local sound file for their alarms, the app asks to access device storage.

- Timer schedules timers that would go off after desired time is passed.
 On the technical level timers are just different method of scheduling alarms
- Reminders are a different method of scheduling alarms tailored towards use cases when one needs to remind themselves about something. Unlike regular alarms, reminders can be set with a specific date in the future and the way they go off is more subtle than alarms that are designed to wake users up.
- **Stopwatch** can measure elapsed time. Stopwatch does not need any special permission to function.
- My Day is a feature that can be optionally brought to the foreground after an alarm is dismissed. My Day is designed to provide useful information to users in the morning. My Day shows weather forecasts and it can be optionally more precise if the user provides permission to determine location from device. My Day also optionally provides information about upcoming events if users agree to access their device calendar.

While using Alarm Clock, we collect and process the following Service and Device Data (in addition to Billing Data for paid version):

Service Data	What we use it for and for how long
Identifier of the content (message) being delivered	 Service Provision (36 months) To monitor service functionality In-product Messaging (6 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Product and Business Improvement (14 months) To monitor messaging performance

IP address	 Service Provision (36 months) Replaced with city/country for delivering geo-specific changes to app's configuration (both local or remote) In-product Messaging (6 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Product and Business Improvement (14 months) To monitor messaging performance
Events and product usage	 To ensure continuous functionality (installations, versions, updates, settings) and map how users interact with our product In-product Messaging (24 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Product and Business Improvement To better understand our users' behavior and users' acquisition (14 months) To consider roadmap for type of features and products we want to develop in future (36 months)

Device Data	What we use it for and for how long
Online identifiers (GUID, Device ID (Android ID), Hardware ID, Profile ID, Advertising ID)	Service Provision (up to 36 months) • To identify correct installation In-product Messaging (24 months)

•	То	inform u	sers	of pr	oblems th	at will not
	be	solved	by	the	currently	installed
	pro	duct and	d to	offer	users a se	olution to
	the	detected	d pr	oblen	n	

Product and Business Improvement

- To better understand our users' behavior (14 months)
- To recognize reinstalls of the app on the same device (36 months)

Third-party Ads (not stored after provision)

 We process Advertising ID which allows ad placement

Information concerning computer or device (carrier, OS version, OS build number, hardware ID, device model, device brand, device manufacturer, device API level)

Service Provision (36 months)

 To ensure functionalities of the product and its features. For example to inform users about settings that make alarm scheduling more reliable on specific devices.

In-product Messaging (6 months)

 To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem

Product and Business Improvement

- To better understand our users' behavior (14 months)
- To determine whether a new feature or product should be developed for subset of users (36 months)

Location (city/country	, Service Provision (36 months)
longitude and latitude)	 Delivering geo-specific changes to app's configuration (both local or remote) Related to My Day feature which can show weather forecasts In-product Messaging (6 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Product and Business Improvement To better understand users' behavior based on approximate location (14 months) To introduce a new feature or product based on approximate location (36
Calendar Events	Service provision (36 months) • To provide an overview of upcoming events on My Day Screen. Specific content of users calendar is only processed locally on user device and never stored anywhere. In-product Messaging (6 months) • To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Product and Business Improvement (14 months) • To better understand users' behavior

Internet and connection	Service provision (36 months)

Battery Saver

Official Product Name

AVG Battery Saver for Windows

Core Functionality

Battery Saver is a tool designed to extend the battery life of your PC by reducing internal and external power demands.

What are Product's Features

• Battery Saver (profiles) creates a power plan profile to apply the predefined set of various settings which shall reduce the amount of power consumed by the PC.

Personal Data We Process

While using Battery Saver, we collect and process the following Service and Device Data (in addition to Billing Data or Account Data if relevant):

Service Data	What we use it for and for how long				
	Service Provision (up to 12 months)				
	 To monitor service functionality In-product Messaging (12 months) 				
	 To inform users of problems 				
	that will not be solved by the				
	currently installed product and				
Events and product usage	to offer users a solution to the				
	detected problem				
	Product and Business Improvement				
	 To better understand our users' 				
	behavior (12 months)				
	• To improve users' overall				
	experience by developing new				
	features or products (up to 12 months)				

Device Data	What we use it for and for how long
201.00 2010	

Internal online identifiers (GUID, MIDEX, UUID)	 Service Provision (up to 12 months) To monitor service functionality In-product Messaging (12 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem
Information concerning device (platform, computer type, vendor, model, brightness, wifi_status, bluetooth_status, battery, capacity, state, lifetime, critical bias, cycle count, voltage, granularity, manufacturer date)	 Service Provision (12 months) To check for compatibility issues in automated crash dumps In-product Messaging (12 months) To inform users of problems that
Location (country, region, city, latitude, longitude, internet service provider, internet autonomous system)	

	 To better understand users' behavior based on approximate location To introduce a new feature or product based on approximate location
Other Avast products/licenses on the device and their status	 Service Provision (12 months) To recognize what features should be enabled or disabled, what product should be installed or uninstalled In-product Messaging (12 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem

The third-party analytics tool we use for Battery Saver is <u>Google Analytics</u>. For further information regarding our third-party analytics partner, including its privacy policy, please refer to our <u>Privacy Policy</u>.

BreachGuard

Official Product Name

BreachGuard

Core Functionality

Our goal is to enable people to take back their privacy online. Remediate past breaches and minimise the risk of abuse of their data in the future. We aim to provide convenient solutions for everyday life online without sacrificing privacy.

1. Enabling users to discover and fix online privacy threats.

- 2. Prevent data collection by advertising companies and data brokers, depending on region.
- 3. Educating users about privacy and security online.

What are Product's Features

- Risk Monitor is 24/7 dark web monitoring for leaked personal information. BreachGuard leverages the most comprehensive database of the dark web it detects whether users have been compromised in a breach and their information is exposed on the dark web. If we identify new breaches we alert you based on the email address you submitted. This is done in cooperation with our partner SpyCloud which checks your credentials against its repository of stolen accounts. For further information please refer to its privacy policy here. The feature also has the capability, if you consent, to scan your browser for weak, reused or breached passwords and provides instructions to fix these passwords.
- Personal info remover submits opt-out requests to data brokers in North America. This feature processes names (first name, middle name, last name), address (street, city, country, state, zip code), phone number, email and Date of Birth (DOB). The reason for this is that data broker optout forms require some of, if not all of the information to submit a valid opt-out request and verify that you are in fact in their database. As a result, we collect this basic information from you to submit the opt-out requests on your behalf.
- Privacy Advisor provides updates and guidance related to online privacy, including but not limited to: recent data breaches and guides to optimize your privacy for social media sites and other common services. If you opt-in, this functionality will process your bookmarks and browsing history to improve the quality of content so we can distinguish guides which are relevant to you (we are not processing full urls but we need only the domain name).
- Identity Assist we have partnered with a third party, Generali Global Assistance, to provide Identity Assist in BreachGuard. The service consists of two sub-features, ScamAssist and Identity Resolution. ScamAssist specialists act as trusted advisors to customers by helping them identify which of the solicitations they have received are potentially

fraudulent. Resolution Specialists are available 24/7/365 to educate customers about how identity theft and cyber crimes occur, as well as provide tips and tools to help keep their identity and digital privacy secure. Note we do not process any personal data from your interaction with Generali, Generali does, see its privacy policy here.

Personal Data We Process

By default, BreachGuard processes locally on your system the following data:

- Names (first name, middle name, last name), address (street, city, country, state, zip code), phone number, email and date of birth to send data opt-out requests on your behalf via Personal Info Remover.
- Browser credentials (website, username, password) to scan your browser for weak, reused or breached passwords and provide instructions how to fix

This data is not sent to our environment.

While using BreachGuard service, we collect and process data in our environment about you and your device in the following situations:

Service Data	What we use it for and for how long
	•
Browsing history and bookmarks (only domain name)	Service Provision (6 months)
	•
installs, Number of Application	To improve user experience and

•	For	development	of	new	features	or
	pro	ducts				

Device Data	What we use it for and for how long
OS Version, BreachGuard Application Version, Activation Key E.g. Windows 10, BreachGuard v1.2.0	 Service Provision (24 months) For users' support and troubleshooting In-product Messaging (24 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Product and Business Improvement (39 months) For development of new features or products To understand the users' behavior and product development planning
OS Locale	 Service Provision (24 months) For users' support and troubleshooting as well as rendering the data broker removal service Product and Business Improvement (39 months) For development of new features or products
e.g. Device Model (e.g. Windows 10 (13-inch 2017), RAM (Random Access Memory), GPU (Graphical Processing Unit), and Central Processing Unit (CPU)	 Service Provision (24 months) For users' support and troubleshooting Product and Business Improvement (39 months) For development of new features or products

Cleaner

Official Product Name

AVG Cleaner for Android ("Cleaner for Android")

Core Functionality

Cleaner for Android detects and removes unnecessary files to free up storage space. Equally, it can stop running processes to optimize device performance.

What are Product's Features

- App Overview allows to browse installed and pre-installed applications, provides functionality to uninstall or stop. In particular, this feature relies on processing device provided stats about other apps. These stats are processed locally (on device) in order to provide the service.
- Media Overview provides an overview of files broken down by type (eg images, audio files, video). This feature does not need any specific data processing outside of operations made locally (on device).
- Battery Saver allows you to select conditions where desired actions (system settings changes) should be applied by this product. For example one can automatically decrease screen brightness when at home. Location based condition require permission to get location data, however these data are never transmitted from the device and all are processed locally.
- Cloud Transfers allows you to backup their files to an external cloud storage. We are using Google Drive and Dropbox APIs to do so, e.g. you can login using their Google or Dropbox credentials to establish such connections. Note credentials are not visible to us.

Personal Data We Process

While using Cleaner for Android, we collect and process the following Service and Device Data (in addition to Billing Data for paid version):

Service Data	What we use it for and for how long
Identifier of the content (message) being delivered	 Service Provision (36 months) To monitor service functionality In-product Messaging (6 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Product and Business Improvement (14 months) To monitor messaging performance
IP address	 Replaced with city/country for delivering geo-specific changes to app's configuration (both local or remote) In-product Messaging (6 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Product and Business Improvement To monitor messaging performance (14 months)
Events and product usage	 Service Provision (36 months) ◆ To ensure continuous functionality (installations, versions, updates, settings) and map how users interact with our product In-product Messaging (24 months) ◆ To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Product and Business Improvement

	 and users' acquisition (14 months) To consider roadmap for type of features and products we want to develop in future (36 months)
Device Data	What we use it for and for how long
	Service Provision (36 months) • For counting users, ensuring functionality
computer or device (carrier, OS version, OS	I I

• To better understand our users' behavior

	 To determine whether a new feature or product should be developed for subset of users (36 months)
Location (city/country, longitude and latitude)	 Delivering geo-specific changes to app's configuration (both local or remote) Related to Battery Profile feature, as users can set being in a certain location as a trigger to automatically launch a Battery saving profile. In-product Messaging (6 months)
	 To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem
	 Product and Business Improvement To better understand users' behavior based on approximate location (14 months) To introduce a new feature or product based on approximate location (36 months)
Applications	 Service provision (36 months) To provide insights, such as usage stats to help identify unused apps (storage cleaning opportunity), drain impact (battery, data) to help identify apps that have significant effect on device resources, or notification stats to help identify "noisy" apps which can be "muted" by links to system settings
	 In-product Messaging (6 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Product and Business Improvement (14)
	months) • To better understand users' behavior

Internet and connection	 Service provision (36 months) For functionality of our features, providing error messaging In-product Messaging (6 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem
	Product and Business Improvement
	 To better understand users' behavior (14 months)
	To introduce a new feature or product based on previous experience (36 months)

These are the third-party analytics tools we use for Cleaner for Android:

- Google Firebase Analytics and Crashlytics for Android
- AppsFlyer

For further information regarding our third-party analytics partners, including their privacy policies, please refer to our <u>Privacy Policy</u>.

The free version of Cleaner for Android serves relevant third-party advertisements. These are the advertising partners we use for this product:

- Google AdMob
- Amazon
- Facebook Audience Network
- InMobi
- AppLovin
- Unity Technologies
- IronSource

For further information regarding our third-party ads partners, including their privacy policies, please refer to our Consent Policy.

Driver Updater

Official Product Name

AVG Driver Updater

Core Functionality

Driver Updater provides scan and potential update or fix of outdated drivers on a users' PC to optimize it for better performance and avoid potential crashes or malfunctions.

Personal Data We Process

While using our Driver Updater services, we collect and process data about you in the following situations:

Service Data	What we use it for and for how long
Identifier of the content (message) being delivered	 Service Provision (12 months) To monitor service functionality In-product Messaging (126 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Product and Business Improvement (12 months) To monitor messaging performance

Events and product usage	Service Provision (12 months) • To ensure continuous functionality (installations, versions, updates, settings) and map how users interact with our product
	 In-product Messaging (12 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem
	 Product and Business Improvement (12 months) To better understand our users' behavior To introduce a new feature or product based on previous experience

Device Data	What we use it for and for how long
Online identifiers (GUID, MIDEX, UUID, Device ID)	 For ensuring continuous functionality and breaking down entries in database In-product Messaging (12 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Product and Business Improvement (12 months) To better understand our users' behavior To introduce a new feature or product based on previous experience
Information concerning device (type, vendor, model, manufacturer, version)	,

	 To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Product and Business Improvement (12 months) To better understand users' behavior To introduce a new feature or product based on previous experience
•	 Service Provision (12 months) To monitor service functionality In-product Messaging (12 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Product and Business Improvement (12 months) To better understand our users' behavior To introduce a new feature or product based on previous experience
Location (country, region, city, latitude, longitude, internet service provider, internet autonomous system)	

Other	Avast	products/licenses
on the	device	and their status

Service Provision (12 months)

 To recognize what features should be enabled or disabled, what product should be installed or uninstalled

In-product Messaging (12 months)

 To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem

The third-party analytics tools we use for Driver Updater for Desktop is <u>Google Analytics</u>. For further information regarding our third-party analytics partner, including its privacy policy, please refer to our <u>Privacy Policy</u>.

Management Console, CloudCare

Official Product Name

AVG Cloud Management Console

Core Functionality

The management console makes it easy to deploy various protection services to multiple devices, manage all devices from one place, mix and match device types, schedule regular scans, and quickly add more devices.

Please note that through this Business Management Console certain settings related to privacy are managed by and information from managed devices is accessible to the administrator of the console. You, as a user, are informed about the role of the administrator during the installation. Businesses are responsible for informing you about this fact and instructing administrators about best practices to ensure users' privacy.

What are Product's Features

- Monitor Device Security uses the console to monitor the health of all managed devices from one place, reviews the number of blocked threats, schedules regular scans, and more.
- Management Dashboard activates devices, adds devices to groups, configures antivirus settings, and views blocked threats from an easyto-read dashboard.
- Master Agent selects a device as the Local Update Server where all updates can be downloaded and saves bandwidth by scheduling and distributing updates to all endpoints in your network when it's convenient.
- Tasks sets up security tasks for all managed endpoints, such as scans, messages, updates, and shutdowns to ensure optimal security for the entire network.
- **Updates** remotely downloads and distributes virus and program updates to all devices from one console to save time and bandwidth.
- **Notifications** receives instant email notifications on any security threats or network issues that need your attention, including outdated antivirus applications, extended device inactivity, and additional device update.
- **Reporting** views detailed reports that include blocked threats, task lists, and protected devices, making it simple to improve security and customize protection.
- Subscriptions Overview lists all valid subscriptions and licenses.
- Network Discovery scans your network for connected devices to bring visibility over what devices should be taken care of.
- Cloud Backup securely stores selected data in the cloud as backup in case of data loss or disaster resulting in data loss/damage.
- Remote Control enables IT admins to quickly and securely connect to a user's device, access files and applications, and help troubleshoot issues in real time.
- Patch Management scans for missing operating system updates and third-party application patches and enables remote installation of those patches to resolve application vulnerabilities of endpoints.
- Secure Web Gateway (CloudCare only) inspects all web connections using DNS-layer protection and full web proxy. It also inspects full SSL and non-SSL paths for risky and new sites.
- Content Filtering (CloudCare only) boosts productivity and security by controlling your employees' internet usage and allowing to restrict their access to specific sites.

• Email Security Services (CloudCare only) is a hosted solution that checks emails for spam, viruses, and unwanted mail using a variety of custom filters. It makes sure that mail is clean before it arrives on the customer's email server, and also offers email archives and encryption.

Personal Data We Process

We process only the following Data in addition to Account Data and Billing Data for paid versions of the products you purchased:

Device Data	What we use it for
Internal online identifiers (Device ID)	 Service Provision For ensuring continuous functionality and breaking down entries in database Product and Business Improvement To better understand our users' behavior To introduce a new feature or product based on previous experience
Device name, brand, type	For users to better identify devices detected on the network To determine whether it supports installation of Avast services
Information concerning computer or device	 Service Provision To check for compatibility issues in automated crash and agent log dumps Product and Business Improvement To better understand users' behavior To introduce a new feature or product based on previous experience
Applications	Service Provision • To determine which application needs to be updated, to provide support and troubleshooting

Files, content	Service Provision • To provide cloud backup, email archive
Location, IP and MAC addresses	Service Provision • For admins to have a possibility to localize their devices
Device status (last connection to Avast)	Service Provision • For admins to see which devices were active and when and determine the risk profile
Location	 To set up a proper product language version In-product Messaging To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Product and Business Improvement To better understand users' behavior based on approximate location To introduce a new feature or product based on approximate location
Language	Service Provision

Service Data	What we use it for
Identifier of the content (message) being delivered	

	For ensuring continuous functionality of notifications
Detections	Service Provision • For administrators to review and analyze what threats were detected in the network, files or emails
URLs	 Service Provision For protection, detection and blocking of malicious or restricted content
Other Avast products/licenses on the device and their status	Service Provision • For administrators to have an overview of running services and expiration dates
Internet and connection / Network data / Number of devices on Network	 Service Provision For security prerequisites (e.g. DNS settings check, port restrictions enabling or remote deployment) Product and Business Improvement To introduce a new feature or product based on previous experience
Events and product usage	■ To provide reporting capability for admins and to ensure continuous functionality (installations, versions, updates, settings) and map how users interact with our product In-product Messaging ■ To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Product and Business Improvement

 To better understand our users' behavior To introduce a new feature or product based on previous experience

Admin and User Data	What we use it for
Name, surname, email address	Service provision • To provide access and services, possibility to send reports or notifications about security events or product updates
User access rights	Service provision • To provide access to the product

Company Data	What we use it for
Name and continformation	 Service Provision To provide support and to contact the company when needed
Business type	Service Provision • To offer the right solution based on the type of the company

We will process the above mentioned this data only as long as necessary for the purposes we described purposes. We use rolling deletion periods which means we regularly delete the data we collected data in the given periods starting from within a certain period of time after the collection of that respective data.

We cooperate with the following third parties when providing our services:

- The Cloud Backup service is provided in cooperation with Infrascale Inc. See their Privacy Policy.
- The Remote Control service is provided in cooperation with XLAB d.o.o.
 See their <u>Privacy Policy</u>.
- The Secure Web Gateway service is provided by Zscaler, Inc. See their Privacy Policy.
- The Email Security Services service is provided in cooperation with Sophos Limited. See their Privacy Policy.

The third-party analytics toolstool we use for Business Management Console is Google Analytics. For further information regarding our third-party analytics partner, including its privacy policy, please refer to our Privacy Policy.

Online Security & Privacy

Official Product Name

Online Security & Privacy

Core Functionality

Online Security & Privacy is a browser extension (or plug-in) available for Chrome, Firefox, Edge and Safari. Whenever you visit a website we check if the site isn't malicious or phishing. We are able to provide you with this functionality by processing URLs.

What are Product's Features

- Antivirus checks the links in search results so the user knows if the page is trying to spread malware.
- Anti-phishing identifies and blocks phishing sites trying to steal your data.
- Anti-tracking blocks annoying tracking cookies that collect data on your browsing activities.

- Marking Search Results shows if the site is safe or not even before the user visits it.
- Advertising Data Collection opts out from ads based on user personal interests. By opting out of interest-based advertising it means the company or companies from which you opt out will no longer show ads that have been tailored to your interests.
- Privacy Advisor allows optimizing privacy settings on the most popular online platforms via step-by-step guidance.
- Global Privacy Control is a <u>3rd party solution</u> we have implemented in the settings, the user can send web companies he visits a 'GPC' signal that he wants to opt out of website selling or sharing his personal information

Personal Data We Process

While using Online Security & Privacy, we process the following Service and Device Data:

Service Data	What we use it for and for how long
URL	 Service Provision (24 months) To check if URLs and the preceding referral domains or URLs (as applicable) are malicious or not to identify its source for threat analysis
	•
Usage data (open extension, rated site, disabled trackers, change settings, site blocked)	 Service Provision (24 months) To ensure functionality (installations, versions, updates, settings), map how users interact with the app and improve its design or flows Product and Business Improvement (24 months) To measure user's behavior in UI and how user interacts with the extension

Device Data	What we use it for and for how long
Internal extension identifier (GUID)	Service Provision (24 months) To distinguish unique malware hits and evaluate it in our systems Product and Business Improvement (24 months) To measure product telemetry and calculate statistics
Information on computer or device (browser, OS)	 Product and Business Improvement (24 months) To obtain usage statistics
Extension information (installation source and time, version and campaign ID)	
Location / Country	 Service Provision (24 months) To detect country specific malware campaigns Product and Business Improvement (24 months) To measure product telemetry and calculate statistics
Language	 Service Provision (24 months) To make sure we communicate in right language Product and Business Improvement (24 months) To measure product telemetry and calculate statistics
Antivirus Status	Service Provision (24 months) ■ To being able to turn on Bank Mode which works only when Antivirus is installed and offers to user to open page in a safe sandbox environment on sensitive sites (banking)

Online Security & Privacy does not process Account or Billing Data.

The third-party analytics tools we use for Online Security & Privacy is <u>Google Analytics</u>. For further information regarding our third-party analytics partner, including its privacy policy, please refer to our <u>Privacy Policy</u>.

SafePrice

Official Product Name

AVG SafePrice

Core Functionality

SafePrice is a browser extension available for Chrome, Firefox, Edge and Safari. Whenever you visit an online shop or product site, SafePrice will show relevant price comparison and discount coupons.

What are Product's Features

- Discount coupons and other promotional offers are typically provided by store owners to incentivize purchases. This means that these coupons are relevant to specific domains, and sometimes specific pages only. In order to be able to offer relevant coupons, we need to check the current page URL against a list of available offers.
- Price Comparison looks for specific portions of the HTML code which allows it to identify basic information about the product you are shopping for – product name, SKU and current price. We then compare this information with a database of prices provided by our partners, and offer cheaper prices for the same product where available.

Information about available offers, coupons or cheaper prices is obtained from Ciuvo. We request this content based on the information obtained from the page, your language settings, country level location and search query within SafePrice. Once you click on the offer, your request will be processed by Ciuvo according to its <u>privacy policy</u>.

Personal Data We Process

While using SafePrice, we process the following Service and Device Data:

Service Data	What we use it for and for how long
URL and referrers	Service Provision (36 months) • To display discount coupons and price comparison offers relevant to the website that you are visiting
Search query	Service Provision (36 months) • If submitted by you, to search for relevant products and discount coupons
Product name and price	 Service Provision (36 months) To display price comparison offers relevant to the product that you are shopping for
User's feedback (ratings, comments)	 Service Provision (36 months) To tell whether the offers you received are relevant and up-to-date, and collect product feedback Product and Business Improvement (36 months) To develop new products based on the user's feedback

Device Data	What we use it for and for how long
Internal extension identifier (GUID)	 Service Provision (36 months) For ensuring continuous functionality and breaking down entries in database Product and Business Improvement (36 months) To measure product telemetry and calculate statistics
Information on computer or device (browser)	Product and Business Improvement (36 months) ■ To obtain usage statistics

Extension information (installation source and time, version and campaign ID)	
Country	 Service Provision (36 months) To make sure our offers are relevant, and collect statistics on SafePrice usage by country
Language	Service Provision (36 months) • To make sure our offers are relevant, and collect statistics on SafePrice usage by language

SafePrice does not process Account or Billing Data.

Secure Browser Secure Browser for Desktop

Official Product Name

AVG Secure Browser ("Secure Browser for Desktop")

Core Functionality

Secure Browser for Desktop is a product currently offered for PC Windows and for macOS users.

What are Product's Features

- Browser Security & Privacy Center is built in Security & Privacy Center which is a curated collection of some key security and privacy features, tools and settings, organized into one management console making it easier for you to control and manage your online privacy and security.
- Anti-Phishing blocks malicious websites and downloads to help prevent your personal computer from becoming infected with viruses, spyware, and ransomware.
- **Privacy Cleaner** cleans your browser history, cached images, cookies including both first-party and third-party cookies, and other junk with just one click, to keep your activity private and free up disk space.
- **Stealth Mode** prevents your browsing history from being stored and removes any tracking cookies (both first-party cookies and third-party cookies) or web cache you pick up during that browsing session.
- Anti-Phishing V2 (Phalanx) blocks malicious websites and downloads to help prevent your personal computer from becoming infected with viruses, spyware, and ransomware.
- Adblock stops Ads being shown in your browser using publicly available so called blocking lists. AdBlock usually does not remove ads, it already prevents them from being loaded and thus also speeds up browser experience.
- Anti-Tracking prevents the user from being tracked across websites by avoiding tracking cookies to be created. This is done using publicly available so called blocking lists. Anti-Tracking usually does not remove the tracking cookies, instead it already prevents them from being loaded and created and thus also speeds up browser experience.
- Anti-Fingerprinting prevents the user from being tracked across websites using browser fingerprinting techniques. As fingerprinting itself cannot be prevented or avoided, this feature prevents being tracked by altering the digital fingerprint of the users browser or PC combination in a way that third-party sites cannot re-identify it.
- Sync means you can sign into the browser using your Avast ID or Google account. Your browsing data (including bookmarks, history, settings, open tabs, passwords, address, phone numbers, and payment information) will be then backed up and available across all your devices. If you sign into the browser using your Avast ID, we receive information that you sync across devices in encrypted form and we are not able to access it or read it.

If you sign into the browser using your Google Account, data will be sent and stored with Google and the sync data use will be governed by Google policies. You can view the data that is synced between Avast Secure Browser and Google by going to your Google account (sync data overview).

- Statistics Are displayed to you throughout the product including the new tab page or via the Anti-tracking UI. Data is shared from our Adblock to give you realistic, realtime and useful data to enhance your browsing experience.
- AVG Addons Store is an online store created and maintained by AVG that allows you to view and install a wide range of extensions. On installation of each extension, you will be asked what data you can share with the extension. Extensions are addons that are built to extend the functionality of the browser itself or integrate an existing service with the browser.

Personal Data We Process

By default, Secure Browser for Desktop processes locally on your system the following data:

- Browsing history information; for example Secure Browser for Desktop may store the URLs of pages that you visit, a cache of text, images and other resources from those pages. If the pre-rendering feature is turned on, a list of IP addresses linked to those pages may also be stored for some period of time;
- Name, surname, email or passwords to help you fill out forms or signs in to sites you visit;
- Permission that you have granted to websites;
- Cookies or data from websites that you visit;
- Data saved by add-ons;
- Record of what you downloaded from websites;
- Any feedback which you decide to share with us.

This data is not sent to our environment. You can manage this data within Secure Browser for Desktop under the "Advanced" section of the Settings page.

If you enable the Sync feature, we will process Sync data in our environment to ensure the sync across your devices.

In our environment we process the following Service and Device Data (in addition to Account Data and Billing Data, if relevant) while using Secure Browser for Desktop:

Service Data	What we use it for and for how long
IP address	 Service Provision (36 months) Replaced with country for delivering geospecific changes to configuration (both local or remote) For prerendering feature functionality, if activated
Events and product usage	 To ensure functionality (installations, versions, updates, settings), map how users interact with the application and improve its design or flows In-product Messaging (24 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Product and Business Improvement To better understand our users' behavior (up to 60 months) Findings about product have an effect on the design or layout of the new one (36 months)
User's feedback ratings	 Service Provision (36 months) To ensure functionality and prevent crashes based on the user's feedback Product and Business Improvement (36 months) To improve the product or its feature based on the user's feedback

User's feedback comments	 Service Provision (36 months) To ensure functionality and prevent crashes based on the user's feedback Product and Business Improvement (36 months) To improve the product or its feature based on the user's feedback
Sync data (bookmarks, history, settings, open tabs, passwords, address, phone numbers, and payment information (name on card, card number, expiration date))	of browser data across devices

Device Data	What we use it for and for how long

Secure Browser for Mobile

Official Product Name

AVG Secure Browser for Android and AVG Secure Browser for iOS (collectively as "Secure Browser for Mobile")

Core Functionality

Secure Browser for Mobile is a private mobile browser offered for Android and iOS users.

What are Product's Features

- Browser Security & Privacy Center is built in Security & Privacy Center which is a curated collection of some key security and privacy features, tools and settings, organized into one management console making it easier for you to control and manage your online privacy and security.
- Adblock stops ads being shown in your browser using publicly available so called blocking lists. AdBlock usually does not remove ads, it already prevents them from being loaded and thus also speeds up browser experience.
- Anti-Tracking prevents the user from being tracked across websites by avoiding tracking cookies to be created. This is done using publicly available so called blocking lists. Anti-Tracking usually does not remove the tracking cookies, instead it already prevents them from being loaded and created and thus also speeds up browser experience.
- Anti-Fingerprinting prevents the user from being tracked across websites using browser fingerprinting techniques. As fingerprinting itself cannot be prevented or avoided, this feature prevents being tracked by altering the digital fingerprint of the users browser or PC combination in a way that third-party sites cannot re-identify it.
- Web Shield protects you from accessing dangerous websites, such as fake sites, sites that have harmful content such as adware, spyware,

ransomware, viruses, all types of other malware that aim at stealing your information.

- **Built-in VPN** (virtual private network) creates an encrypted tunnel between your device and the internet, securing your browsing data against eavesdroppers.
- Security Scanner feature will scan the device, its internet connection and browser configuration (otherwise known as Browser Shields) for threats and vulnerabilities, process the findings, and display a result screen with potential improvements.
- Nuke cleans your browser history, cached images, cookies including both first-party and third-party cookies, and other junk with just one click for a specified domain, to keep your activity on that domain private and free up disk space.
- Remove Site Data cleans your browser history, site cookies, and offline data with the current site with just one click, to keep your activity private and free up disk space.
- **Video Downloader** enables you to download videos from supported websites to your device.
- Media Vault allocates your files, including those you download during your browsing sessions, to the browser application's encrypted file system. These files are stored on your device and are accessible through the browser application.
- **Secure Mode** encrypts your DNS queries, stops ads being shown in your browser, prevents your browsing history from being stored, and removes any tracking cookies (both first-party cookies and third-party cookies) or web cache you pick up during that browsing session.
- Secure & Private Mode creates an encrypted tunnel between your device and the internet, encrypts your DNS queries, stops ads being shown in your browser, prevents your browsing history from being stored, and removes any tracking cookies (both first-party cookies and third-party cookies) or web cache you pick up during that browsing session.
- PIN Protection secures your device against real world threats from local attacks by locking access to the browser application on your device with a unique code only you know. Your PIN Code is encrypted on disk and is not stored on any servers.
- Sync means you can sign into the browser using your Avast ID. Your browsing data (including bookmarks, history, settings, open tabs,

passwords, address, phone numbers, and payment information) will be then backed up and available across all your devices. If you sign into the browser using your Avast ID, we receive information that you sync across devices in encrypted form and we are not able to access it or read it.

 Privacy Statistics are showing the users' the advantage of our AdBlock and VPN through numbers, by presenting the number of ads blocked, number of malware blocked by our Web Shield, amount of browsing data protected by our VPN.

Personal Data We Process

By default, Secure Browser for Mobile processes locally on your system the following data:

- Browsing history information; for example Secure Browser for Mobile may store the URLs of pages that you visit, a cache of text, bookmarks, zones, images and other resources from those pages. If the prerendering feature is turned on, a list of IP addresses linked to those pages may also be stored for some period of time;
- Name, surname, email or passwords to help you fill out forms or signs in to sites you visit;
- Permission that you have granted to websites;
- PIN Code you provide during login to Secure Browser for Mobile;
- Cookies or similar technologies such as pixel tags and web beacons from websites that you visit;
- Records of what you downloaded from websites when using Media Vault.

This data is not sent to our environment. You can manage this data within Secure Browser for Mobile under the "Browsing Mode Settings" and "Data Settings" section of the Security & Privacy Settings page.

If you enable the Sync feature, we will process Sync data in our environment to ensure the sync across your devices.

In our environment we process the following Service and Device Data while using Secure Browser for Mobile (in addition to Account Data and Billing Data, if relevant):

Service Data	What we use it for and for how long
IP address	Service Provision (per session) Replaced with country for delivering geo-specific changes to configuration (both local or remote) For prerendering feature functionality, if activated
Events and product usage	 Service Provision (36 months) To ensure functionality (installations, versions, updates, settings), map how users interact with the application and improve its design or flows In-product Messaging (24 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Product and Business Improvement To better understand our users' behavior (up to 24 months) Findings about product have an effect on the design or layout of the new one (24 months)

Sync data (bookmarks, history, Service Provision (3 months) settings, open tabs, passwords, address, phone numbers, and payment information (name on card, card number, expiration date))

• If you enable the Sync feature to ensure the sync of browser data across devices

Device Data	What we use it for and for how long
Online identifiers (GUIDs, Device IDs)	 To ensure functionality (installations, versions, updates, settings) and to track users subscription trials and purchases In-product Messaging (24 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Product and Business Improvement To better understand our users' behavior (24 months) To introduce a new feature or product based on previous experience (24 months)

Secure VPN

AVG Secure VPN

We are a leading provider of security and privacy tools and therefore we are deeply committed to protecting and respecting your privacy. Our <u>VPN Policy</u> (together with any other documents referred to in it) sets out the basis on which any data we collect from you, or that you provide to us, will be processed by us.

TuneUp

Official Product Name

AVG TuneUp for Windows, AVG TuneUp for Mac (collectively as "TuneUp")

Core Functionality

TuneUp is an ultimate tune-up program which speeds up and cleans your PC (Windows and Mac), updates installed apps, and fixes other problems.

What are Product's Features

TuneUp for Windows:

- Maintenance scans and deletes registry items, shortcuts, system and programs temp or unnecessary files, browser caches, history and cookies.
- **Program Deactivators** scans and disables installed third-party programs which have background, startup or scheduled tasks.
- Software, Disk or Browser Cleaner scan and temporarily hide or uninstall third-party programs, deletes unnecessary files from disk or browser history.

- **Fix Problems** scans and fixes common Windows problems which might put PC at risk (e.g. missing Windows updates, administrative shares on public folders).
- Disk Doctor or Defrag scans for potential errors and fixes system drive or defrags your system drive.
- Software Updater scans and updates third-party programs and their versions installed on PC.

TuneUp for Mac:

- Clutter Scan scans and deletes application caches, log files, trash, downloads folder, development junk. It looks for similar data on connected external drives as well. Only data on the amount of KB and cleaned is processed.
- Find Duplicates scans for duplicate files in directories selected by you.
 Only data on the amount of KB and duplicate files found and cleaned is processed.
- Find Photos scans photos and evaluates their quality and similarity to help you decide which you want to keep. Only data on the amount of KB and photos found and cleaned is processed.
- Uninstall Apps scans and removes applications and programs for which
 it is necessary to process app name, size, version and last date of its
 usage.

Personal Data We Process

While using TuneUp, we collect and process the following Service and Device Data (in addition to Billing Data or Account Data if relevant):

Service Data	What we use it for and for how long

Events and product usage (such as product version, product language, license type, days to expiration, number of potential problems or detected junk)

Service Provision (up to 12 months)

• To monitor service functionality

In-product Messaging (12 months)

 To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem

Product and Business Improvement

- To better understand our users' behavior (12 months)
- To improve users' overall experience by developing new features or products (up to 12 months)

Device Data	What we use it for and for how long
Internal online identifiers (GUID, MIDEX, UUID, Device ID)	 Service Provision (up to 12 months) To identify correct installation In-product Messaging (12 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem
Information concerning device (platform, types of cleaning objects, objects size, app name, vendor, version, rating, certification)	 Service Provision (up to 12 months) To check for compatibility issues in automated crash dumps In-product Messaging (12 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Product and Business Improvement (up to 12 months) To better understand users' behavior

	To introduce a new feature or product based on previous experience
Location (country, region, city, latitude, longitude, internet service provider, internet autonomous system)	
Applications (our other products, installed applications on a user's computer)	 Our other apps to know which products users already have on their computer Third-party applications or programs installed on users' computers to improve Cleanup Sleep Mode, Software Cleanup and Software Updater functionality In-product Messaging (6 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Product and Business Improvement (up to 36 months)

 To improve the users' overall experience by developing new feat and products To understand/estimate market opportunity for new products and reatures
