

# AVG Business Backup and Disaster Recovery

## Deliver complete data protection to businesses of all sizes.

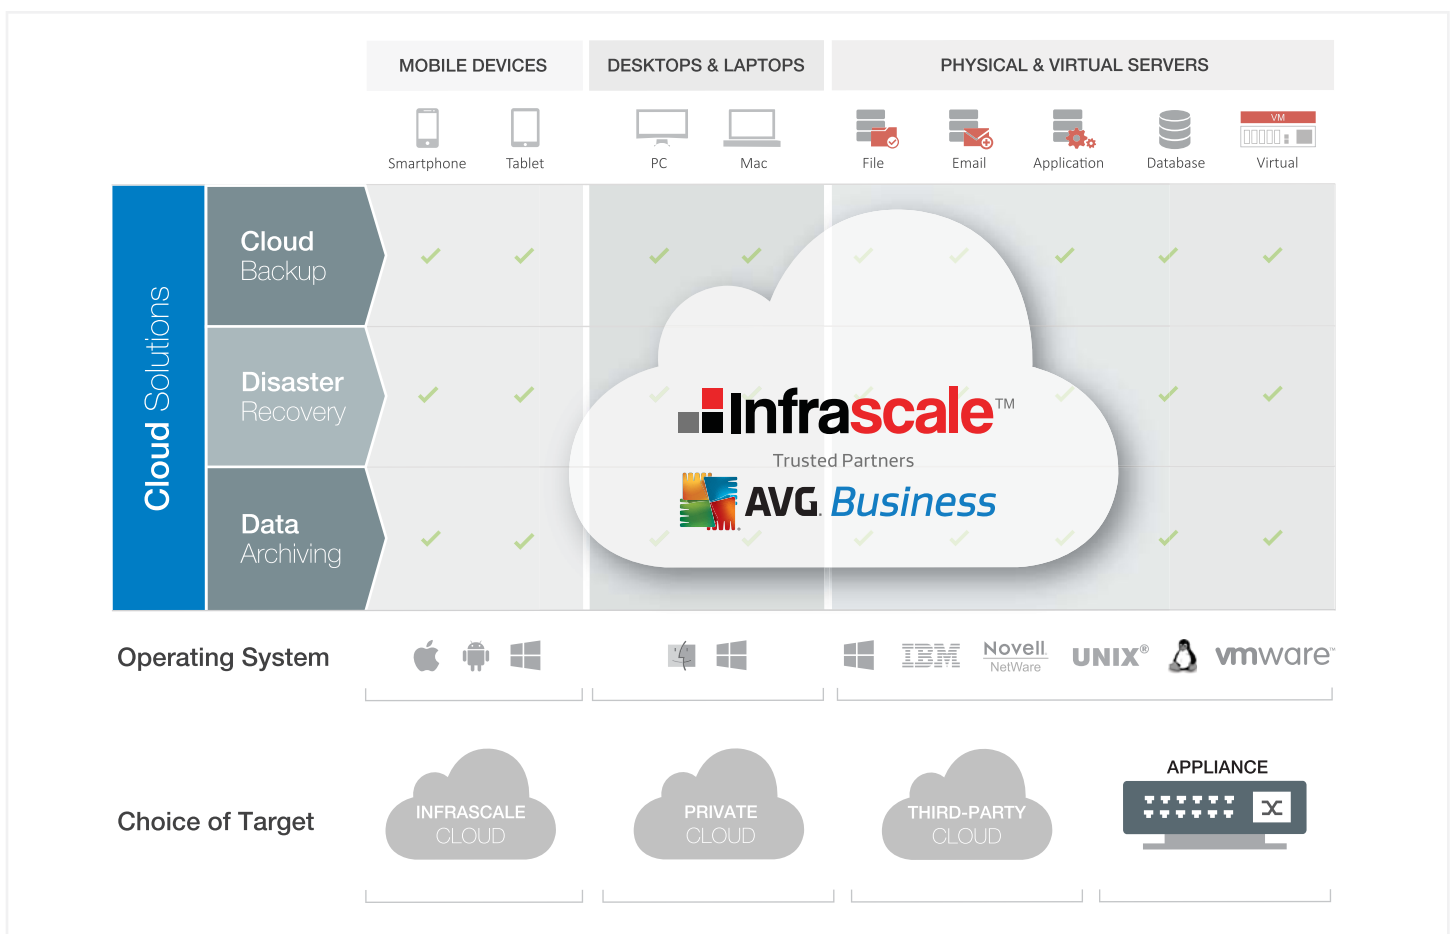

We understand that your data is important, we also understand that your data resides on different devices. How do you protect all the data on all the devices with a single solution?

We teamed with Infrascale to deliver a complete, cloud-based backup and disaster recovery solution, purpose built to serve MSPs and their business clients.

Infrascale offers both hybrid cloud backup (cloud-connected appliances) and direct-to-cloud replication to serve organizations of all sizes and across all vertical markets.

These solutions provide a robust backup and DR solution designed to minimize downtime, expedite RTOs (Recovery Time Objective), and simplify the data recovery process by harnessing the power of the cloud.

Our approach is simple: one vendor, one solution, total data protection.

Complete Data Protection Designed For MSPs: When we say complete, we mean complete. Our Data Protection Platform is a comprehensive solution. Now, you can easily protect the data residing on mobile devices, laptops, desktops and servers (both virtual and physical).

### Any Device, Any Operating System

Protect data and applications no matter where they live, including physical and virtual servers, laptops/desktops, and mobile devices. We support more than 50 versions of operating systems, including Windows, Unix, Linux, AIX, VMware, and Mac enabling you to protect your client's mixed environments.

### Infinite Cloud Capacity

With traditional backup appliances, your cloud storage is capped by the physical storage of the appliance. Need more storage, buy another appliance. Our hybrid backup solutions provide a bottomless cloud coupled with a lean on-premise accelerator (appliance) that functions more like a cache than a traditional purpose-built backup appliance.

### Any Cloud Support

Store and replicate data to Infrascale's cloud, a private cloud, or popular third-party clouds such as AWS or Azure.

### Single Pane of Glass

Use one cloud-based console to manage and monitor your client's backups remotely, and easily troubleshoot issues without requiring VPN or direct network access.

### Cloud Spillover

With traditional backup appliances, you are limited by the storage capacity of the box. With the Data Protection Appliance, you can intelligently spillover to the cloud without having to worry about storage limits.

### Flexible Storage Targeting

IT administrators determine what information stays local or goes to the cloud, based on custom policies, for fast recovery while meeting the most stringent RTO requirements.

### Unlimited Cloud Storage

Other hybrid appliances limit the amount of cloud storage available, often based on the storage capacity. The Data Protection Appliance provides unlimited cloud storage priced on a simple per terabyte, per month basis.

### Dramatically Better Value

MSPs can profit from leveraging our hybrid cloud backup and DR solutions, all priced to maximize your client's ROI and TCO.

### More Affordable Cloud Storage

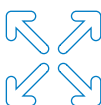

The price per terabyte of cloud storage is far more affordable than competing solutions – about 25% less per terabyte/month.

### Virtual Appliance Option

Save even more with our virtual Data Protection Appliance, which is simple to deploy, scalable and easy to configure.

### Huge Capacity Range

Protect from 2 TBs to 176 TBs per appliance so you can start very small and grow to very large on-premise storage configurations.

### Our Cloud, Your Cloud, Any Cloud

Our backup and disaster recovery solutions let you choose your cloud, enabling you to create the right solution based on the customer's needs, not your vendor's limitations.

Ready to start selling an easy-to-manage, easy to deploy complete data protection solutions and add to your bottom line?
